

5th North-American Training Course on StereoElectroEncephaloGraphy

«The spectrum of hypermotor seizures»

October 16th-20th, 2016

Sacacomie Hotel, Saint-Alexis-Des-Monts, QC, CANADA

Dear colleagues and friends,

Welcome to this 5th SEEG course, that will focus on “The spectrum of hypermotor seizures” and will follow the same organization as the one used for the four previous courses .

The will be primarily based on computer-assisted practical training sessions where each attendees can access and analyse neuroimaging and video-EEG/SEEG data, and extensive plenary discussions.

Plenary discussions will cover the various pathophysiological theories, classification and terminology proposals, ictal phenomenology and seizure onset zones associated with hypermotor attacks.

We will also thoroughly discuss how to proceed to SEEG investigations in patients with hypermotor seizures, especially those MRI-negative. To this aim, exemplary cases will be presented.

In-depth analysis of pre-surgical data from five real cases will allow exploring all practical aspects of SEEG, including electrical stimulation, interpretation of data, and surgical decision-making

We hope that this 5th round will be as successful as the previous ones and look forward to welcoming you at the outstanding Sacacomie Hotel.

With our best regards.

Welcome

Dear Colleagues, dear Friends

On Behalf of the Scientific Committee, we are glad to announce the fifth North-American Training Course in Stereo-ElectroEncephaloGraphy (SEEG), which will be held from October 16 to 20, 2016.

This course follows the four years topic-oriented cycle started in 2012 with Temporal and Temporal 'plus' epilepsies in 2012, Frontal epilepsies in 2013, Posterior cortex epilepsies in 2014, and Epilepsies associated with Malformations of cortical development in 2015. This new cycle will deal with seizure semiology and will start with hypermotor seizures.

As last years, participants will primarily train on real patient's data under the supervision of SEEG experts from the experienced centers of Chicago, Cleveland, Firenze, Grenoble, Lausanne, London, Lyon, Milano, Montreal, Nancy, Paris, Rennes and Sidney.

After reviewing digitized video-scalp-EEG, MRI, and PET data, each group will have to decide on whether to perform and how to design an optimal SEEG investigation. They will then review and analyze SEEG findings, and eventually recommend a surgical decision. Each group conclusions will be thoroughly discussed during plenary sessions.

Plenary sessions will also include an introductory conference of the newly proposed Sleep Hypermotor Epilepsy syndrome, and lectures on the localizing significance of hypermotor seizures, the way to delineate epileptic networks associated with hypermotor seizures, and the new recommendations for intracranial EEG evaluation.

We are very happy to welcome you in the amazing Sacacomie venue,

With our best regards,
