Welcome

Dear colleagues and friends,

On behalf of the Scientific Committee, we are delighted to welcome you in Venice (Italy) for the 6th European SEEG Course

This 6th edition will focus on « Seizures of the visual and Oculomotor System », and will follow the same organization as that of the five previous courses.

It will be primarily based on computer-assisted practical training sessions where each attendees can access and analyse numerical neuroimaging and video-EEG/SEEG data, and extensive plenary discussions.

The theoretical part of the course will address several aspects of the functional anatomy of the oculo-motor and visual systems, **setting the complex anatomo-physiological frame** for the SEEG approach to various types of focal seizures, **such as those characterized by visual symptoms and prominent versive signs, typically** involving those systems.

We hope that this 6th round will be as successful as the previous ones and look forward to welcome you in the beautiful city of Venice.

With our warmest regards

4th North-American Training Course on StereoElectroEncephaloGraphy

«Epilepsies associated with Malformations of cortical development»

September 20th-24th, 2015

Sacacomie Hotel, Saint-Alexis-Des-Monts, QC, CANADA

Dear colleagues and friends,

On behalf of the Scientific Committee, we are delighted to welcome you for the Fourth North-american Training Course in StereoElectroEncephaloGraphy (SEEG), which will be held from september 20th to 24th, 2015 in Montreal.

This Fourth SEEG course will focus on «Epilepsies associated with Malformations of cortical development» and will follow the same organization as the one used for the three previous courses .

It will be primarily based on computer-assisted practical training sessions where each attendees can access and analyse numerical neuroimaging and video-EEG/SEEG data, and extensive plenary discussions. These will cover the classification and neuroimaging of the Malformation of the cortical development, as well as all aspects directly related to SEEG, including selection criteria, choice of the number and targets of depth electrodes, interpretation of SEEG recordings, results of cortical stimulation, and surgical decision-making, and all aspects directly related to SEEG, including selection criteria, choice of the number and targets of depth electrodes, interpretation of SEEG recordings and results of cortical stimulation, as well as surgical decision-making.

We hope that this 4th round will be as successful as the previous ones and look forward to welcoming you at the outstanding Sacacomie Hotel.

With our best regards.
