Welcome

Dear colleagues and friends,

On Behalf of the Scientific Committee, we are delighted to welcome you to the First Asian Training Course in Stereo-ElectroEncephaloGraphy (SEEG), which will be held at the Hilton Hotel in Singapore, April 21-24, 2017.

This initiative echoes the success of the annual SEEG training course organized in Europe since 2010, and in North-America since 2012, both of which triggered an exponentially growing interest of the epilepsy surgery community towards SEEG.

This new Asian Training Course will be similar to those previously held in other world regions, with a few didactic lectures, but primarily hands-on sessions to foster the acquisition of practical skills through case-based discussions. After reviewing digitized video-scalp-EEG, MRI, and PET data, each group will have to decide on performing and designing an optimal SEEG investigation.

In deemed implanted cases, they will then need to review and interpret the SEEG findings, and eventually recommend a surgical decision.

Each group conclusions will be thoroughly discussed during plenary sessions.

Groups of participants will work on real patient's data under the permanent supervision of world leading experts in the field of SEEG.

Looking forward seeing in Singapore
Warm regards

6th North-American Training Course on StereoElectroEncephaloGraphy

« SEEG investigation of epileptic spasms: finding a «focus»
for a generalized ictal phenomenon »

September 16-20, 2017

Sacacomie Hotel, Saint-Alexis-Des-Monts, QC, CANADA

Dear colleagues and friends,

This 6th SEEG course will focus on : « SEEG investigation of epileptic spasms: finding a «focus»
for a generalized ictal phenomenon » and will follow the same organization as the one used for the five previous courses .

It will be primarily based on computer-assisted practical training sessions where each attendee can access and analyse neuroimaging and video-EEG/SEEG data, and extensive plenary discussions.

These will cover the various pathophysiological theories, ictal phenomenology, differential diagnosis, etiologies and seizure onset zones associated with epileptic spasms.

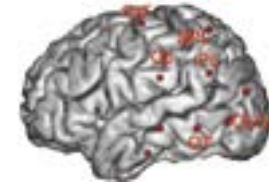

We will also thoroughly discuss how to proceed to SEEG investigations in patients with epileptic spasms.

In-depth analysis of pre-surgical data from five real cases will allow exploring all practical aspects of SEEG, including electrical stimulation, interpretation of data, and surgical decision-making.

We hope that this 6th round will be as successful as the previous ones and look forward to welcoming you at the outstanding Sacacomie Hotel.

With our best regards.
